

Grant Hooks

CS202

24 February 2016

Project 1 - Good work!

Project 2 - Good work! -You should check whether a file exists for reading in

Project 3 - Good work! -Should pass function by reference at least once -String compare needs a fix for incorrect input

Project 4 - Program didn't work - Memory leak occurred – Out of bound when you perform the wrap of original message

1. When is it better to use pointers vs arrays?
2. Dynamic Memory
3. Headers and makefile
